Dr. H. O. Bruner
U. S. Atomic Energy Commission
Division of Biology and Medicine
Washington, D. C. 20545

Dear Dr. Bruner,

Here are copies of the status report on the Pa-injected people and a summary of what I was able to accomplish in my follow-up project on a trip to Rochester last week. Dr. Stenard's team, in of NCRP met in Rochester and I was able to stay over for a day to do some digging around.

Everyone at such sites was helpful. Dr. Christine Marmouse, who is in charge of the metabolic ward at Strong, thinks she can obtain excretion and possibly tissue specimens from the three surviving persons who still live in Rochester without making any moves. Before any arrangements are made we should have the permission of your office to go ahead, and we will handle an estimate of special costs. Strong has a charge-back system and the metabolic ward has no special funds. I will be talking to Dr. Marmouse about this in the next few days. I expect to make a full-blown proposal and we can work it down from there.

Have a good holiday.

Sincerely,

Walter S. Baruch
